

SAMY RJOB

Software Engineer · Backend & Distributed Systems

Manchester, UK · samy_rjob@proton.me · +33 6 52 05 56 09 · samyrjob.github.io/portfolio · github.com/samyrjob · linkedin.com/in/samyr-rjob-800315176

PERSONAL STATEMENT

Software engineer and MSc Computer Science candidate. I build software that runs in production: backends, real-time systems and AI products, with a strong focus on security. I shipped a live multiplayer world on my own, built a RAG assistant used by real university cohorts, and co-founded a live recruitment platform where I designed and built the backend and data layer.

TECHNICAL SKILLS

Languages: Go, Java, TypeScript / JavaScript, Python, SQL, Ruby

Backend & Frameworks: Spring Boot, Next.js, Node.js, Ruby on Rails, Go (net/http)

Frontend: Angular, React, Svelte, Tailwind CSS

Data & Infra: PostgreSQL, MySQL, Supabase, Redis, Qdrant, Kafka, Docker, AWS (S3 / CloudFront / KMS), nginx

Security & AI: Row-Level Security, WebAuthn, JWT, Ed25519, HMAC, OAuth / SSO · RAG, OpenAI, Ollama, spaCy, MCP

EXPERIENCE

Elite Talents · Co-Founder & Backend Engineer

2025 – Present

Toulouse, France (Remote) · elitetalents.fr

- Designed and built the whole backend of a live recruitment platform: a 165-endpoint Next.js 14 API in TypeScript with Zod-validated inputs, spanning six actor types on a 50-table PostgreSQL schema with row-level security on every table (default-deny).
- Own the security model and integrations: a two-tier Supabase access model (service-role client kept strictly server-side), WebAuthn passkeys, JWT, bcrypt, CSRF protection and rate limiting, plus Stripe billing via the Supabase Wrapper (API key in Vault) and OpenAI candidate-to-role matching.

YES Germany · Software Developer Intern

Apr 2024 – Sep 2024

Faridabad, India

- Launched an AI-powered generator for statements of purpose (SOPs) using the OpenAI API, cutting creation time from 4 hours to 15 minutes per SOP; deployed on Streamlit.
- Built an ETL pipeline extracting 3,500+ SOPs via the Dropbox API with spaCy classification (85% accuracy), and automated Dropbox / Google Sheets workflows that cut the admissions team's manual work by 70%; mentored a trainee.

PROJECTS

Futura · Solo Full-Stack & Systems · futura-game.com

Jan 2025 – Present

- Solo-built a browser-to-desktop multiplayer virtual world with a cryptographically signed desktop launcher (Wails, Go + Svelte): a short-lived token chain from SSO down to a 60-second Ed25519 game JWT piped over stdin, and verify-before-write delivery (streaming SHA-256, Ed25519-signed manifest, zip-slip and zip-bomb guards).
- Built a distributed real-time backend (Spring Boot, MySQL) on a three-tier trust model: JWT-scoped reads, HMAC-signed writes with a 30-second replay window, a custom TCP protocol, a Kafka audit trail and STOMP room events. Also built an open-source, LLM-drivable Piskel pixel-art engine (~50 MCP tools).

2YM Chatbot · Production RAG Assistant (MSc placement-year substitute)

Nov 2025 – Present

- Built a threshold-gated RAG assistant (Go, Qdrant, Ollama) that grounds answers only above a 0.65 confidence floor and escalates below it, so it never guesses: a 9.4-second median answer versus a ~2-day staff wait, resolving 67.9% of turns without staff involvement.
- Cut escalations from 17% to 9.8% as the knowledge base grew (rated 4.11/5 helpful, 83.3% fully answered); refactored avatar tone into a unit-tested deterministic rule engine and enforced RBAC with a TOTP and Tailscale researcher dashboard, at ~£1.01 total external cost.

EDUCATION

MSc Computer Science · University of Chester, Chester, UK

2024 – 2026 (expected)

Master, Programme Grande École · Audencia Business School, Nantes, France

2020 – 2024

CPGE (Scientific & Commercial Preparatory Classes) · Lycée Malherbe, Caen, France

2018 – 2020
